Cessation in Oncology

The American Society of Clinical Oncology has produced a new policy statement regarding cessation.

→ [See Full Article including Recommendations](#)

Clearly there are benefits to quitting tobacco even when faced with a diagnosis of cancer. Oncology patients should, at the very least, be provided with accurate information about how quitting tobacco may improve their health outcomes, and their response to various cancer treatments. Also, oncology patients that quit tobacco, and are given a clean bill of health after chemotherapy and radiation, often start using tobacco again – followup is key to keeping patients on track.

Learn More about Cessation in Oncology

To learn more about cessation in oncology refer to the Oncology Module on the PACT website found in the Health Care chapter. This module is accessible to PACT level I trained professionals only.
